

LEDs: A Sustainable Choice

In the era of smart cities and digital transformation, LED technology isn't just the sharpest way to get noticed – it's one of the most sustainable choices a business can make.

LEDs: A Smarter, Cleaner, Alternative to Print

Ditch the Waste, Go Digital!

Stop throwing your marketing in the garbage.

VueTronic digital displays automatically adjust brightness based on ambient light conditions, reducing nighttime brightness to as little as 5% of daytime levels, or off entirely. This minimizes glare, light pollution, and energy consumption.

Combined with high-efficiency LEDs and long product lifespans (10 years+), **VueTronic** delivers a sustainable solution for modern communities and supports municipal sustainability and **ESG** Goals.

Retired **VueTronic** Digital Displays and their components are recycled to the Electronic Recycling Association in Canada. www.era.ca

Every time a marketing material is printed, shipped, installed, removed, and discarded, it leaves an environmental footprint. Vinyl banners are not easily recyclable. Most materials, especially PVC-based vinyl, are not easily recyclable & often end up in landfills where they can take decades to decompose. **VueTronic** changes that.

Changing your message becomes as simple as a click of a button. A digital LED display turns your signage from a disposable product to a reusable communication platform. One Display (or multiple displays). Endless Messages. Zero Waste.

This is sustainability in action.

The result is a reusable, communication platform that delivers powerful public messaging while supporting sustainability goals and responsible energy use.

VueTronic. Better for your business. Better for our planet.
